

# STARS® Site Registration Safety Network

Site Registration began in 1996 when the Canadian Association of Petroleum Producers asked STARS to offer a program that would compliment the existing 911 system.

On average STARS monitors 4200 sites daily.

The highest level of medical support on each site is clearly visible creating a network of medical support across 3 provinces.

Every year we respond to between 80 and 100 industry emergencies across Western Canada.

Registering a site results in the facilitation and coordination of the most appropriate medical response during dynamic emergency situations.
